

The driving attachment of the **AC** Speedometer has many improved and exclusive features.

It is easily attached. No holes to drill. The crown road wheel gear is held by the regular Ford hub flange bolts. The fiber pinion gear meshes into the crown road wheel gear, keeping it clean and free from mud, snow and ice, eliminating the constant troubles of the conventional spur gear type.

It has no swivel joint to require care and attention. Its flexible shaft is of the cross-wound piano wire type. The driving attachment fits all Ford spindles, old or new type.

Speedometer

for
Ford Cars

YOUR Ford car or truck cannot be operated economically or intelligently unless it is equipped with an accurate, dependable speedometer.

Only by means of a good speedometer can you know:

How fast your car is going.
The distance you have traveled.
When to change your motor oil.
What mileage you get from gasoline.
What service tires are giving.
How to follow road guides and detour instructions.

For many reasons the **AC** Speedometer is the best instrument for FORD owners. It is absolutely **accurate** and **noiseless**: its sturdy improved construction assures dependable and trouble-free service throughout the life of the car.

AC

SPEEDOMETER

A NECESSITY—NOT AN ACCESSORY

A Reflection of Refinement

A high grade magnetic instrument, fully jeweled, registering 70 miles per hour, 100,000 mile total register and 100 mile trip, registering tenths and resettable. Black face with white figures, Rim of solid brass nicked. Complete with Driving Shaft, Gears and attachments

\$15.00

Western Schedule \$16.00

Canadian Schedule \$21.00

The **AC** Speedometer is permanent - will not look like an afterthought.

The **AC** Speedometer installed on your Ford instrument board presents a finished appearance. The Flexible Shaft is hidden from view. The white figures can be read at a glance with ease and accuracy. The speed indicator registers steadily and evenly on the roughest roads, a distinct **AC** feature.
